TURBINE CLOSURE SYSTEMS

**TOPS ON & TOPS OFF
MADE EASY & SAFE**

TURBINE CLOSURE SYSTEMS

What Does it Do?

The Turbine Closure System reduces the Tops On/Off time by 6 hours per each casing. On average it looks to save you over a day's time of maintenance. Our Tritorc Turbine Closure System ensures the Casings are closed Hydraulically thereby eliminating the need to heat the studs for this purpose.

Benefits:

- Faster Operation Time
- Safer To Use
- Accurate Load Delivery
- Easy to Operate
- Requires less Manpower
- Efficient

Avoids Drawbacks associated with Induction Heating such as:

- Burn injuries
- Electrical Hazards
- Overheating of Studs
- Time Consumption
- Wasted Manpower

TYPICAL OPERATING PROCEDURE FOR THE TCS:

1. Assemble the TCS in the designated Bolt location
2. Interconnect the hoses supplied with the TCS and one common connection to the Powerpack
3. Pressurize the Pump at regular intervals of 100 bar & simultaneously measure the Zero Gap
4. Once the desired Zero Gap is achieved, lock the Puller Bar of the TCS with the lock nut provided
5. Release the Hydraulic Pressure from the TCS and dismantle the hoses and remove the Load Cell and Bridge
